

Data Inconsistencies Register

Complete list of built-in errors and document contradictions

Client	Generation Bridge Foundation
Document reference	GBF Case Key
Classification	ANSWER KEY - FACILITATOR ONLY
Version	3.1 July-September 2026

Teams earn credit for finding these, documenting their response, and triangulating with client documents and transcripts. None should be ignored.

Part 1 - Dataset inconsistencies (GBF_Datasets.xlsx - Workflow B only)

A should only learn material issues through Findings Memos. Mark down if A opens the raw file or if B dumps the cleaning log without translation.

Ref	Issue	Table	What teams should see	Expected handling
DC-01	Duplicate beneficiary IDs	beneficiary_registry	Two IDs appear twice with conflicting province values and different last_updated dates.	De-duplicate before any count; keep the latest last_updated and log the conflict.
DC-02	Mixed date formats	All tables with dates	Same field uses dd/mm/yyyy, yyyy-mm-dd and dd-mm-yyyy interchangeably.	Standardise to one format before joins; document the rule in the assumption log.
DC-03	Inconsistent placement coding	employment_outcomes	placed_90d uses Y, Yes, 1, N, No, 0 and blank.	Map to a single binary flag; blank = missing follow-up, not 'not placed'. Primary VPBank rate uses completion_status = Completed only.
DC-04	Inconsistent attendance coding	programme_attendance	attended uses Y, N, 1 and 0. BM uses fewer mentor-circle sessions than SF/PD classroom sessions.	Normalise to 1/0; analyse BM separately or with a session-count caveat.
DC-05	Impossible age	beneficiary_registry	Record GBF-2025-10417 has a date of birth implying age ~42 (one intentional error).	Flag as data entry error; exclude from age analysis; do not treat the whole file as out-of-eligibility.
DC-06	Wage typo	employment_outcomes	Record GBF-2025-10417 shows wage_vnd_monthly = 99,999,999 (notes field flags error).	Investigate; exclude or cap for wage averages; never report uncorrected.
DC-07	Missing ethnicity	beneficiary_registry	Roughly 18% of ethnicity fields are blank.	Report missingness; do not impute without stating why.
DC-08	Missing disability flag	beneficiary_registry	Roughly 5% of disability_status fields are blank.	Treat as unknown; compare Y-only rate with and without unknowns.

DC-09	Province label mismatch	beneficiary_registry	Same geography appears as 'Ho Chi Minh City' and 'HCMC'.	Create a lookup table; never double-count provinces.
DC-10	Dong Nai cost double-entry	hub_costs_2025	September 2025 for hub DN appears twice with identical totals.	Remove duplicate row before summing hub costs.
DC-11	Hours on inactive mentor	volunteer_hours	Mentor M-099 has status=Inactive but still has hours_logged.	Filter status=Active for mentor-hour averages, or justify including Inactive hours.
DC-12	Text-formatted funding amount	funding_by_source	UK aid / FCDO 2025-Q3 amount_vnd_m is stored as text with a thousands comma (e.g. '1,250').	Convert to number before SUM; note in data quality report.
DC-13	Export aligns with programme headcount	beneficiary_registry	Registry is sized to ~800 (programme guideline: served in 2025). Waitlist (~1,100) is a separate snapshot. D-01 reports 2024 completers (592) and public 71% placement - a different grain.	Do not add waitlist to served totals. Do not equate D-01 completers with registry rows. State placement definition whenever reporting rates.
DC-14	Capacity headroom for scale	hub_capacity_jan2026	DN/LA show overloaded caseloads and thin staff/mentor benches relative to throughput caps.	Funding scenarios and growth options must stress-test staff, mentor and finance capacity - not cost alone.

Part 2 - Document and narrative contradictions

Ref	Topic	Sources	Contradiction	What strong teams do
DC-D01	Placement rate definition	D-01 vs D-02 vs ST-02	D-01 public report: 71% within 90 days (broad: includes gig work >=15 hrs/week). ST-02: formal contract rate closer to 63%. D-02 says Pathway Digital reporting was generous.	Teams must state which definition they use and report both where possible.
DC-D02	Pathway Digital completion	D-02 vs D-01	Donor-facing figure 68%; true completers/ starters = 52% (wrong denominator).	Strong teams catch this and discuss reputational risk.
DC-D03	Dong Nai performance	D-02, ST-01, ST-05, EP-02	Internship drop-out 38% vs org average 22%; transport and employer quality cited.	Dashboard should show DN below 65%; recommendations must address DN if scaling.
DC-D04	Disability gap	ST-03 vs D-01	Reported disability share ~6-7%; population nearer 9%. Placement ~45-50% vs ~70% on the public broad definition.	Mark down if disability breakdown is missing from analysis or recommendations.
DC-D05	Board email thread	D-08	Forwarded anonymously; unverified; politically motivated opinions.	Use for stakeholder sentiment only; triangulate with transcripts.

DC-D06	YouthWorks threat	D-10 vs ST-04 vs ST-05	Development says overstated; field staff see waitlist leakage in Binh Duong border districts.	No single truth; evidence-based judgement required.
DC-D07	VPBank conditions	D-03 vs DN-01	65% at 90 days required; DN-01 open to quality-focused alternative but not open-ended delay.	Funding scenarios must stress-test the 65% condition honestly.
DC-D08	Shortening the placement window	ST-04 vs D-03 vs DN-01	Anh Duc pushes 'earlier management visibility' / leading indicators without naming a new primary metric. D-03 Clause 3-4 and DN-01 lock 65% at ninety days; earlier indicators may be internal only and do not replace disbursement measurement.	Red line if a team elevates a shorter window (e.g. 60-day) as the primary Board/donor metric to look better. Strong teams catch this by reading the grant, not by being told.
DC-D09	Long An pilot	D-02, ST-01, BD-01	~60% drop-out; board member T.N. pushes expansion for political reasons.	Scaling to Long An without fixing the model is a common weak answer.
DC-D10	Social enterprise conflict	D-12, EP-01	GBF Staffing Solutions earns placement fees from same employers who take interns.	Strong teams surface the conflict in trade-off reflection or options; it is not labelled for them.

Part 3 - Expected quantitative patterns (after cleaning)

- Among Completed records, HCMC hubs can clear ~65%+ broad; Dong Nai stays below (especially Formal).
- Including Dropped in the denominator pulls most hubs under 65% - definition choice matters.
- Long An and Pathway Digital underperform Skills Forward on placement.
- Broad placement rate sits above formal-only rate (aligns with ST-02 ~63% formal narrative; 2025 export may differ slightly).
- Disability placement gap of ~20+ points vs overall (aligns with ST-03).
- Higher attendance associated with placement, but confounded by transport and motivation.
- Aggressive growth scenario struggles to meet 65% without selection bias (efficiency vs ethics tension) and fails capacity headroom at DN/LA.
- Mentor counts differ by source (D-01 ~95 org-wide active mentors; hub_capacity_jan2026 active_mentors sum ~26; volunteer_hours has ~44 active IDs plus Inactive M-099) - strong teams state the grain.
