

Data Task Solutions

CONFIDENTIAL - expected findings and coaching methods

Client	Generation Bridge Foundation
Document reference	Facilitator pack
Classification	FACILITATOR ONLY - do not distribute
Version	3.1 July-September 2026

Workflow B should find these. Workflow A should learn material issues only through Findings Memos, not by opening the workbook. A receives a Data Estate Brief (catalog) and Analysis Plans - never the dictionary or raw file. Participant packs no longer include step-by-step DB-3/DB-4 recipes - Buddies coach method; this file holds the key.

DB-1 Data quality - what B should find

- Duplicate beneficiary IDs (built in) - keep latest last_updated; log the conflict.
- placed_90d coded as Y/Yes/1/N/No/0/blank - normalise; blank ≠ 'not placed'.
- Mixed date formats across tables.
- Impossible age (~42) on GBF-2025-10417 - treat as entry error, not mass ineligibility.
- A wage outlier (99,999,999) on the same record - exclude or cap for averages.
- Roughly 18% ethnicity and ~5% disability_status blank - report missingness.
- Dong Nai September 2025 costs double-entered in hub_costs_2025.
- Hours logged against inactive mentor M-099 (status=Inactive) in volunteer_hours.
- 'HCMC' vs 'Ho Chi Minh City' inconsistency.
- UK aid / FCDO 2025-Q3 amount stored as text '1,250' - coerce before SUM.
- BM attendance uses fewer mentor-circle sessions than SF/PD classroom sessions - caveat.
- Registry ~802 rows / 800 unique IDs (matches guideline served); waitlist exactly 1,100; hub throughput caps sum to 800 - do not conflate with D-01's 592 completers.
- hub_capacity_jan2026 shows DN/LA overloaded; active_mentors sum ~26 (≠ D-01's ~95 org-wide figure) - state the grain.

DB-2 expected patterns (foundation dashboard)

- Among Completed records, HCMC hubs can clear ~65%+ broad; Dong Nai stays below, especially on Formal.
- Including Dropped in the denominator pulls every hub under 65% - teach the definition choice.
- Formal-only rate sits below the broad rate (aligns with ST-02).
- Disability placement materially below overall (aligns with ST-03).

When A asks about placement drivers / attendance / programme design

Coach B toward this path only if stuck (do not hand A the recipe):

1. Normalise attendance coding in programme_attendance (Y/N/1/0).
 2. Pivot to one attendance rate per beneficiary_id.
 3. XLOOKUP (or join) placement from employment_outcomes.
 4. Compare average attendance for placed vs not placed.
 5. Findings Memo must name confounders (e.g. transport, motivation) - association is not causation.
- Expected pattern: higher attendance associates with placement, but confounded.

When A asks about mentoring / completion / volunteer capacity

Coach B toward:

1. Total mentor hours per young person from volunteer_hours.
 2. Exclude or flag hours logged against inactive mentors before averaging.
 3. Compare completers vs those who withdrew; do not overclaim.
- Expected pattern: mentor hours weakly associate with completion.

Funding scenarios (B5)

- Aggressive growth struggles to hold 65% honestly without selection pressure - the efficiency/ethics tension teams should discover.
- Strong teams also fail Aggressive (and sometimes Moderate) on capacity: staff FTE, mentor bench and monthly burn in hub_capacity_jan2026, not funding alone.
- Scenario choice should reference mission + Board ambition, then capacity constraints.
