

# Design-Thinking Playbook

## Facilitated activities for Workflow A

|                    |                                   |
|--------------------|-----------------------------------|
| Client             | Generation Bridge Foundation      |
| Document reference | MOM-2026-WSA-02                   |
| Classification     | Participant material - Workflow A |
| Version            | 3.1   July-September 2026         |

This playbook gives you a run sheet for each design-thinking activity. Every activity must connect to evidence. Design thinking interprets the evidence; it does not replace it. When you need a number, write an Analysis Request rather than guessing.

## Stakeholder mapping

|          |            |
|----------|------------|
| When     | Week 2     |
| Duration | 90 minutes |

Run sheet:

1. Brainstorm every party affected by the decision, one per sticky note.
2. Cluster them, then plot on a power/interest grid.
3. Star the five you most need to understand and record why.

*Output: A stakeholder map and a shortlist for deeper study.*

## Problem framing

|          |             |
|----------|-------------|
| When     | Week 2      |
| Duration | 120 minutes |

Run sheet:

1. Each member writes 'the decision the Board must make is...' independently.
2. Share, challenge, and agree a single problem / decision statement in your own words (not a paraphrase of the engagement letter).
3. Build an issue tree from the evidence; generate hypotheses that imply asks for Workflow B.

*Output: A problem statement, issue tree and hypotheses (deliverable A1).*

## First demand and request cycle

|          |            |
|----------|------------|
| When     | Week 3     |
| Duration | 90 minutes |

Run sheet:

1. Read Workflow B's Data Estate Brief (catalog only - if they offered the raw file, refuse it).
2. From A1 hypotheses, draft the Demand Brief: ranked decision needs and what would change your mind.
3. Save Demand Brief PDF to A\_B\_Exchange/; wait for B's Analysis Plan on the top items.
4. Complete Analysis Request R-01 for the top Demand item; log it; hand to B.

*Output: DMD + R-01 in A\_B\_Exchange/; waiting for Analysis Plan / FM-01.*

## Empathy mapping

|          |            |
|----------|------------|
| When     | Week 3     |
| Duration | 90 minutes |

Run sheet:

1. Choose one beneficiary archetype grounded in BN-01 to BN-04.
2. Fill the four quadrants - says, thinks, does, feels - using cited quotes only.
3. List what you still do not know, and which of those gaps need a request to B.

*Output: An evidence-based empathy map (part of deliverable A3).*

## Journey mapping

|          |             |
|----------|-------------|
| When     | Week 3      |
| Duration | 120 minutes |

Run sheet:

1. Map the stages from awareness to ninety-day employment.
2. Mark the emotional highs and lows and the pain points.
3. Attach a quote or a Findings Memo cite to each pain point.

*Output: A current-state journey map with prioritised pain points.*

## Ideation - How Might We and Crazy Eights

|          |             |
|----------|-------------|
| When     | Week 4      |
| Duration | 120 minutes |

Run sheet:

1. Turn each priority pain point into a 'How might we...' question.
2. Generate ideas quickly and without judgement, then sketch eight variations of the best.
3. Dot-vote; check surviving ideas against what the transcripts actually say.

*Output: A shortlist of concepts to develop into options.*

## Prioritisation with Findings

|          |            |
|----------|------------|
| When     | Week 4     |
| Duration | 60 minutes |

Run sheet:

1. Plot options on an impact-versus-feasibility grid.
2. Ask Workflow B to challenge placements using Findings Memos, not raw tables.
3. Record the assumptions behind every placement.

*Output: A prioritisation matrix feeding deliverable A4.*
