

Data Analysis Workbook

Foundation methods and request handling for Workflow B

Client	Generation Bridge Foundation
Document reference	MOM-2026-WSB-02
Classification	Participant material - Workflow B
Version	3.1 July-September 2026

This workbook covers foundation work (quality + dashboard) and how to run the A↔B loop: Data Estate Brief -> read Demand -> Analysis Plan you own -> Findings Memo. It does not prescribe every deep-dive method. When A states a new demand, design the analysis yourself; ask your Buddy for coaching questions if you are stuck. You do not need to write code.

Suggested order

1. Weeks 1-3: dictionary, profile, clean (DB-1 / B1); write Data Estate Brief for A; then dashboard pivots (DB-2 / B2).
2. Week 3: read Demand Brief; write Analysis Plan(s); answer each R-xx with a Findings Memo before optional deep-dives.
3. Funding scenarios (B5) once A has draft options or asks what growth costs.

Concepts in plain English

Term	What it means
Pivot table	A table that groups and summarises your data automatically
XLOOKUP	Finds a value in one table and returns a matching value from another
Placement rate	Placed completers divided by total completers - define both parts
Correlation	Two things move together; it does not prove one causes the other
Confounder	A hidden factor that affects both things you are comparing
Selection bias	Those who attend more may already differ in ways that affect outcomes
Data Estate Brief	Catalog for A of what you hold - never the raw workbook
Analysis Plan	Your method to answer A's demand - you own it; A does not co-edit pivots

From Demand to Findings Memo

1. Read A's Demand Brief (and later each R-xx). Restate the decision question.
2. Write an Analysis Plan (AP-xx): approach, definitions, risks, ETA. File in A_B_Exchange/. A may clarify scope - not rewrite your joins.
3. Decide which tables answer it. Clean only what you need first.
4. Compute the result. Note definitions (Completed vs Dropped; Formal vs Broad).
5. Write the Findings Memo in plain language. Attach at most two curated charts.
6. Update the Request Log status to 'Returned'.

If Demand is vague ('send us everything on mentoring'), send it back for a decision question. If the method is unclear, ask Buddy: 'Which tables would you look at first?' - not 'What is the answer?' Never paste the data dictionary into the Estate Brief.

Foundation: dashboard pivots (DB-2)

1. After cleaning, build placement rates by hub, programme and gender.
2. State the placement definition on every chart.
3. Keep the workbook internal; only curated views leave via Findings Memos.

Reporting standards

- State the placement definition you used and why.
- Never delete an outlier silently - investigate and record the decision.
- Give every chart a title that states the finding.
- State placement definition; do not mix served totals with waitlist demand.
- Never claim causation from a simple association.
- Never attach the raw workbook to a Findings Memo.
