

Data Dictionary

Operational export held by Workflow B

Client	Generation Bridge Foundation
Document reference	MOM-2026-WSB-DD
Classification	Workflow B only - do not share with Workflow A
Version	3.1 July-September 2026

This dictionary describes the nine tables in GBF_Datasets.xlsx. It is for Workflow B only. Do not forward this file or the workbook to Workflow A.

Tables

Table	Approx. rows	Purpose
beneficiary_registry	~802 rows / 800 unique IDs	Master list (2 intentional duplicate IDs); matches guideline served 2025
employment_outcomes	~700	Employment status ~90 days after completion/drop
programme_attendance	~5,000	Session-level attendance (incl. BM mentor circles)
survey_outcomes_2025	~500	End-of-programme satisfaction survey
volunteer_hours	~1,700	Mentor hours logged (check status)
hub_costs_2025	60+	Monthly operating costs by hub
hub_capacity_jan2026	5	Staff, mentors, caseload, burn, throughput headroom
funding_by_source	48	Quarterly income by funder
geographic_waitlist	24	Waitlist by district - totals 1,100 (Jan 2026)

Key fields

Field	Notes
beneficiary_id	Primary join key; duplicates exist in registry only - use last_updated to resolve
last_updated	ISO date on registry rows; keep the latest when IDs collide
placed_90d	Y/Yes/1/N/No/0/blank; blank = missing follow-up, not 'not placed'
completion_status	Completed / Dropped / Active. Primary 65% rate uses Completed only
employment_type	Formal vs Gig - report both when discussing the 65% threshold
province / hub	Geography of delivery or residence; HCMC vs Ho Chi Minh City
date fields	Enrolment, completion and outcome dates - mixed formats
wage_vnd_monthly	Monthly wage; check notes for the known data-entry error
disability_status	Disability flag where captured
volunteer_hours.status	Active vs Inactive - exclude Inactive for mentor-hour averages unless justified
amount_vnd_m	Funding in millions VND; at least one cell is text with a thousands comma (e.g. 1,250)

Treat the export like a real monitoring dump

Operational exports are rarely clean. Profile every table before you analyse. Document what you find, how you handled it, and what Workflow A needs to know before relying on a rate. Do not

assume definitions match the language in public reports. If a figure in a shared document and a figure you calculate disagree, investigate - do not silently pick the nicer one.

Counts, waitlist and definitions

beneficiary_registry is sized to align with the programme guideline (~800 young people served in 2025; ~802 rows including two intentional duplicate IDs). D-01 is the prior-year public report (592 completers in 2024 and the 71% broad placement story) - do not treat D-01's completer count as the registry row count. geographic_waitlist is a separate demand snapshot (exactly 1,100) - do not add it to served totals. Always state the placement definition (broad vs formal; completion_status = Completed vs including Dropped) when you report a rate.

Mentor counts will not match across sources without caveats: D-01 reports organisation-wide volunteer mentors (~95); hub_capacity_jan2026 lists delivery mentors on each hub roster (sum ~26); volunteer_hours contains every mentor ID that logged time (including Inactive M-099). Do not force them to reconcile.

Capacity when choosing scale scenarios

Recommendations must fit GBF's mission and Board ambitions, but also its internal capacity. Use hub_capacity_jan2026 (staff FTE, active mentors, caseload, monthly burn, max annual throughput) together with hub_costs_2025 and funding_by_source before endorsing Hold / Moderate / Aggressive growth. A scenario that clears a funding gap but breaks caseload or mentor headroom is not viable.
