

Workflow B - Operations & Analytics

Engagement brief and requirements

Client	Generation Bridge Foundation
Document reference	MOM-2026-WSB-01
Classification	Participant material - Workflow B
Version	3.1 July-September 2026

Purpose of this workflow

Workflow B owns the operational evidence. You hold the datasets and the data dictionary. You clean, analyse, and translate findings into language Workflow A can use. Success is not a dump of pivots; it is a clear answer to a question A actually asked.

Hard constraint on sharing

Do not share GBF_Datasets.xlsx or the data dictionary with Workflow A. Respond to Analysis Requests with Findings Memos and curated charts or summary tables you choose to attach. If A asks for 'the file', refuse and ask what decision the number needs to support.

Your responsibilities

- Own and apply the data dictionary; profile and clean the export.
- Maintain the Request Log; answer Analysis Requests on time.
- Translate findings into plain language with caveats and definitions.
- Build a working dashboard (B only) and pull curated charts into Findings Memos.
- Model funding scenarios behind any recommendation A is considering.
- Give an honest assessment of placement under clear definitions.
- Maintain the assumption log, risk register and version control.

Deliverables, owners and deadlines

#	Deliverable	Format	Due
B1	Data quality report (internal to B)	Templates/Data_Quality_Report.docx -> PDF	Tue 21 Jul
FM	Findings Memos (responses to R-01+)	4_Shared_Toolkit/Templates/Findings_Memo.docx	Ongoing
B2	Performance dashboard (working file)	GBF_Performance_Dashboard.xlsx	Fri 24 Jul
B3	Analysis summary	Templates/Analysis_Summary.docx -> PDF	Wed 29 Jul
B4	Evidence-check memo on A's options	Templates/Evidence_Check_Memo.docx -> PDF	Fri 31 Jul
B5	Funding scenarios	Toolkit workbook, 'Funding Scenarios' tab	Thu 6 Aug

The five analysis tasks

Complete these as your technical backbone. Prefer to package results as responses to A's requests where the ask fits. Interpretation matters more than technical sophistication.

DB-1 - Data quality audit.

- Profile every table for missing values, duplicates and format problems.
- Use WSB_Data_Dictionary.pdf as your field guide. Investigate anomalies; do not delete silently.
- Record every cleaning decision in the assumption log. Share with A only the material issues that affect a decision (via Findings Memo), not the full cleaning log.

DB-2 - Performance dashboard.

- Use pivot tables to show placement by hub, programme and gender.
- Flag any rate below 65 per cent. Title charts with the insight, not the topic.
- Export only curated views into Findings Memos when A asks.

DB-3 - Attendance and outcomes.

- Join attendance to outcomes; compare means for placed vs not placed.
- State that association is not causation; name at least two confounders.

DB-4 - Mentoring and completion.

- Total mentor hours per young person, excluding inactive mentors.
- Compare completers with those who withdrew. Do not overclaim.

DB-5 - Funding scenarios.

- Model hold steady, moderate growth (+30%), aggressive growth (+80%).
- Use D-12 unit costs and D-03 VPBank terms.
- Judge whether each scenario can meet the 65% condition under an honest placement definition.

How Workflow A will challenge you

Before you submit, Workflow A will check that you answered their questions in plain language, that you did not share the raw file, that definitions and caveats are stated, and that unanswered requests are logged. You cannot submit without their signature on the handoff checklist.
