

Data Analysis Workbook

Step-by-step guidance for Workflow B

Client	Generation Bridge Foundation
Document reference	MOM-2026-WSB-02
Classification	Participant material - Workflow B
Version	3.1 July-September 2026

This workbook explains how to complete analysis work in Excel. Do foundation work (quality + dashboard) before the first request arrives. Package later results as Findings Memos when answering Workflow A's requests. You do not need to write code. If you use Python or R, the same documentation standards apply.

Suggested order

1. Weeks 1-3: dictionary, profile, clean (DB-1 / B1), then dashboard pivots (DB-2 / B2).
2. From Week 3: answer each Analysis Request with a Findings Memo before starting optional deep-dives.
3. Run DB-3 or DB-4 only when a request needs them; run DB-5 once A has draft options.

Concepts in plain English

Term	What it means
Pivot table	A table that groups and summarises your data automatically
XLOOKUP	Finds a value in one table and returns a matching value from another
Placement rate	Placed completers divided by total completers - define both parts
Correlation	Two things move together; it does not prove one causes the other
Confounder	A hidden factor that affects both things you are comparing
Selection bias	Those who attend more may already differ in ways that affect outcomes

From request to Findings Memo

1. Read A's request. Restate the decision question in your own words.
2. Decide which tables and fields answer it. Clean only what you need first.
3. Compute the result. Note definitions and sample limitations.
4. Write the Findings Memo in plain language. Attach at most two curated charts.
5. Update the Request Log status to 'Returned'.

Worked approach to DB-3 (attendance and outcomes)

1. In programme_attendance, create a helper column that is 1 when attended and 0 when not, normalising mixed Y/N/1/0 coding.
2. Build a pivot for each young person's attendance rate.
3. Use XLOOKUP to bring in placement from employment_outcomes.
4. Compare average attendance of those placed with those not placed.
5. Interpret the gap in two or three sentences and name confounders (for example transport and motivation).

Reporting standards

- State the placement definition you used and why.
- Never delete an outlier silently - investigate and record the decision.
- Give every chart a title that states the finding.
- Note the sample-size limitation versus the 2,847 in D-01.
- Never attach the raw workbook to a Findings Memo.
