

Design-Thinking Playbook

Facilitated activities for Workflow A

Client	Generation Bridge Foundation
Document reference	MOM-2026-WSA-02
Classification	Participant material - Workflow A
Version	3.0 July 2026

This playbook gives you a run sheet for each design-thinking activity. Every activity must connect to evidence. Design thinking interprets the evidence; it does not replace it. When you need a number, write an Analysis Request rather than guessing.

Stakeholder mapping

When	Week 1
Duration	90 minutes

Run sheet:

1. Brainstorm every party affected by the decision, one per sticky note.
2. Cluster them, then plot on a power/interest grid.
3. Star the five you most need to understand and record why.

Output: A stakeholder map and a shortlist for deeper study.

Problem framing

When	Week 1
Duration	120 minutes

Run sheet:

1. Each member writes 'the real problem is...' independently.
2. Share, cluster, and agree a single problem statement.
3. Build the issue tree and generate hypotheses that imply asks for Workflow B.

Output: A problem statement, issue tree and hypotheses (deliverable A1).

First Analysis Request

When	Week 2
Duration	45 minutes

Run sheet:

1. Pick the hypothesis that would most change your recommendation if false.
2. Write R-01: decision question, hypothesis, what a useful answer looks like.
3. Hand it to Workflow B and log it on the Request Log.

Output: R-01 filed; waiting for Findings Memo FM-01.

Empathy mapping

When	Week 2
Duration	90 minutes

Run sheet:

1. Choose one beneficiary archetype grounded in BN-01 to BN-04.
2. Fill the four quadrants - says, thinks, does, feels - using cited quotes only.
3. List what you still do not know, and which of those gaps need a request to B.

Output: An evidence-based empathy map (part of deliverable A3).

Journey mapping

When	Week 2
Duration	120 minutes

Run sheet:

1. Map the stages from awareness to ninety-day employment.
2. Mark the emotional highs and lows and the pain points.
3. Attach a quote or a Findings Memo cite to each pain point.

Output: A current-state journey map with prioritised pain points.

Ideation - How Might We and Crazy Eights

When	Week 3
Duration	120 minutes

Run sheet:

1. Turn each priority pain point into a 'How might we...' question.
2. Generate ideas quickly and without judgement, then sketch eight variations of the best.
3. Dot-vote; check surviving ideas against what the transcripts actually say.

Output: A shortlist of concepts to develop into options.

Prioritisation with Findings

When	Week 3
Duration	60 minutes

Run sheet:

1. Plot options on an impact-versus-feasibility grid.
2. Ask Workflow B to challenge placements using Findings Memos, not raw tables.
3. Record the assumptions behind every placement.

Output: A prioritisation matrix feeding deliverable A4.
