

# Design-Thinking Playbook

## Facilitated activities for Workstream A

|                    |                                     |
|--------------------|-------------------------------------|
| Client             | Generation Bridge Foundation        |
| Document reference | MOM-2026-WSA-02                     |
| Classification     | Participant material - Workstream A |
| Version            | 2.0   July 2026                     |

This playbook gives you a run sheet for each design-thinking activity. Every activity must connect to evidence in the data room; design thinking is a way to interpret the evidence, not a substitute for it.

### Stakeholder mapping

|          |            |
|----------|------------|
| When     | Week 1     |
| Duration | 90 minutes |

Run sheet:

1. Brainstorm every party affected by the decision, one per sticky note.
2. Cluster them, then plot on a power/interest grid.
3. Star the five you most need to understand and record why.

*Output: A stakeholder map and a shortlist for deeper study.*

### Problem framing

|          |             |
|----------|-------------|
| When     | Week 1      |
| Duration | 120 minutes |

Run sheet:

1. Each member writes 'the real problem is...' independently.
2. Share, cluster, and agree a single problem statement.
3. Build the issue tree and generate hypotheses.

*Output: A problem statement, issue tree and hypotheses (deliverable A1).*

### Empathy mapping

|          |            |
|----------|------------|
| When     | Week 2     |
| Duration | 90 minutes |

Run sheet:

1. Choose one beneficiary archetype grounded in BN-01 to BN-04.
2. Fill the four quadrants - says, thinks, does, feels - using cited quotes only.
3. List what you still do not know.

*Output: An evidence-based empathy map (part of deliverable A3).*

### Journey mapping

|          |             |
|----------|-------------|
| When     | Week 2      |
| Duration | 120 minutes |

Run sheet:

1. Map the stages from awareness to ninety-day employment.
2. Mark the emotional highs and lows and the pain points.
3. Attach a data point or quote to each pain point.

*Output: A current-state journey map with prioritised pain points.*

## Ideation - How Might We and Crazy Eights

|          |             |
|----------|-------------|
| When     | Week 3      |
| Duration | 120 minutes |

Run sheet:

1. Turn each priority pain point into a 'How might we...' question.
2. Generate ideas quickly and without judgement, then sketch eight variations of the best.
3. Dot-vote and check each surviving idea against GBF's values.

*Output: A shortlist of concepts to develop into options.*

## Prioritisation

|          |            |
|----------|------------|
| When     | Week 3     |
| Duration | 60 minutes |

Run sheet:

1. Plot options on an impact-versus-feasibility grid.
2. Let Workstream B challenge the placement of each with data.
3. Record the assumptions behind every placement.

*Output: A prioritisation matrix feeding deliverable A4.*
