

Workstream B - Operations & Analytics

Engagement brief and requirements

Client	Generation Bridge Foundation
Document reference	MOM-2026-WSB-01
Classification	Participant material - Workstream B
Version	2.0 July 2026

Purpose of this workstream

Workstream B owns the evidence base. You turn a messy data export into trustworthy findings, model the money, and give the team an honest picture of what is working and what is not. You also keep the team disciplined: assumptions, risks and version control run through you.

Your responsibilities

- Profile and clean the datasets, documenting every decision.
- Build a clear performance dashboard.
- Analyse the relationships between attendance, mentoring and outcomes.
- Model the funding scenarios behind any recommendation.
- Give an honest assessment of the true placement rate.
- Maintain the assumption log, risk register and version control.

Deliverables, owners and deadlines

#	Deliverable	Format	Due
B1	Data quality report	Templates/Data_Quality_Report.docx -> PDF	Tue 21 Jul
B2	Performance dashboard	GBF_Performance_Dashboard.xlsx	Fri 24 Jul
B3	Analysis summary	Templates/Analysis_Summary.docx -> PDF	Wed 29 Jul
B4	Evidence-check memo on WS-A options	Templates/Evidence_Check_Memo.docx -> PDF	Fri 31 Jul
B5	Funding scenarios	Toolkit workbook, 'Funding Scenarios' tab	Thu 6 Aug

The five analysis tasks

Data analysis is worth 20 points. Interpretation matters more than technical sophistication; explain every finding in plain English and state its limitations.

DB-1 - Data quality audit.

- Profile every table for missing values, duplicates and format problems.
- You should expect to find, among other things: duplicate beneficiary IDs; dates in more than one format; the placement field coded inconsistently (Y, Yes, 1, N, No, 0, blank); at least one impossible age; at least one wage typo; a double-entered month of Dong Nai costs; and hours logged against an inactive mentor.
- Record every cleaning decision and its rationale in the assumption log.

DB-2 - Performance dashboard.

- Use pivot tables to show the placement rate by hub, by programme and by gender.
- Apply conditional formatting to flag any rate below 65 per cent.
- Produce three charts, each with a title that states the insight, not the topic.

DB-3 - Attendance and outcomes.

- Join attendance to outcomes on beneficiary_id using XLOOKUP.
- Compare mean attendance for those placed and not placed.
- State clearly that association is not causation, and name at least two confounding factors (for example motivation and transport).

DB-4 - Mentoring and completion.

- Use SUMIFS to total mentor hours per young person, excluding inactive mentors.
- Compare completers with those who withdrew.

DB-5 - Funding scenarios.

- Model three scenarios: hold steady, moderate growth (+30 per cent), and aggressive growth (+80 per cent).
- Use the audited unit costs from D-12 and the VPBank terms from D-03.
- Judge whether each scenario can meet the 65 per cent condition honestly, without selecting easier-to-place young people.

How Workstream A will audit you

Before you submit, Workstream A will check that your cleaning choices do not quietly hide uncomfortable truths, that your chart titles match what the interviews say, and that you have not claimed causation from correlation. You cannot submit without their signature on the audit checklist.
