

Workflow B - Operations & Analytics

Engagement brief and requirements

Client	Generation Bridge Foundation
Document reference	MOM-2026-WSB-01
Classification	Participant material - Workflow B
Version	3.1 July-September 2026

Purpose of this workflow

Workflow B owns the operational evidence. You hold the datasets and the data dictionary. You clean, analyse, and translate findings into language Workflow A can use. Success is not a dump of pivots; it is a clear answer to a question A actually asked - delivered fast because you prepared the data before the ask arrived.

Hard constraint on sharing

Do not share GBF_Datasets.xlsx or the data dictionary with Workflow A. Respond to Analysis Requests with Findings Memos and curated charts or summary tables you choose to attach. If A asks for 'the file', refuse and ask what decision the number needs to support.

Two modes of work (do not wait idle)

You do not need A's permission to understand the data. You do need a request before you push decision numbers into A's narrative.

Mode	When	What you do
Foundation (proactive)	Weeks 1-3	Read the dictionary; profile and clean (B1 / DB-1); build a working dashboard (B2 / DB-2). This is your readiness work while A frames the problem.
Service (reactive)	From Week 3	Answer Analysis Requests with Findings Memos. Package only what the request needs.
Challenge (joint)	Weeks 4-6	Evidence-check A's options (B4); run funding scenarios (B5) once options exist.

If no request has arrived by mid-Week 3, nudge A for R-01. Do not invent a strategy for them - ask what decision is stuck.

Your responsibilities

- Own and apply the data dictionary; profile and clean the export.
- Maintain the Request Log; answer Analysis Requests on time.
- Translate findings into plain language with caveats and definitions.
- Build a working dashboard (B only) and pull curated charts into Findings Memos.
- Model funding scenarios behind any recommendation A is considering.
- Give an honest assessment of placement under clear definitions.
- Maintain the assumption log, risk register and version control.

Deliverables, owners and deadlines

#	Deliverable	Format	Due
B1	Data quality report (internal to B)	Templates/Data_Quality_Report.docx -> PDF	Tue 11 Aug
FM	Findings Memos (responses to R-01+)	4_Shared_Toolkit/Templates/Findings_Memo.docx	From Week 3
B2	Performance dashboard (working file)	GBF_Performance_Dashboard.xlsx	Fri 14 Aug
B3	Analysis summary (tied to Requests answered)	Templates/Analysis_Summary.docx -> PDF	Wed 19 Aug
B4	Evidence-check memo on A's options	Templates/Evidence_Check_Memo.docx -> PDF	Fri 21 Aug

B5	Funding scenarios	Toolkit workbook, 'Funding Scenarios' tab	Thu 27 Aug
----	-------------------	---	------------

Analysis backlog

DB-1 and DB-2 are mandatory foundation. Everything else follows the request: when A asks a decision question, decide which tables answer it, analyse, and return a Findings Memo. If you are unsure how to approach a request, ask your Buddy for coaching questions - not for the answer.

DB-1 - Data quality audit (foundation).

- Profile every table for missing values, duplicates and format problems.
- Use WSB_Data_Dictionary.pdf as your field guide. Investigate anomalies; do not delete silently.
- Record every cleaning decision in the assumption log. Share with A only the material issues that affect a decision (via Findings Memo), not the full cleaning log.

DB-2 - Performance dashboard (foundation).

- Use pivot tables to show placement by hub, programme and gender.
- Flag any rate that looks material under the definition you state.
- Keep this as a B working file. Export only curated views into Findings Memos when A asks.

On-request analysis (no fixed recipe).

- When A files an Analysis Request in A_B_Exchange/, respond with a Findings Memo in the same folder using the official template.
- Your job: restate their decision question, choose tables from the dictionary, compute carefully, state definitions and caveats.
- Do not invent a full analysis plan before a request arrives. Do not share raw tables. If stuck on method, ask Buddy - they will nudge, not solve.
- Chat acknowledgements are fine; the assessable answer is the FM-xx PDF.

Funding scenarios (after draft options).

- Run once A has sketched options or asks what growth costs (deliverable B5).
- Use audited costs (D-12) and funder terms (D-03); state every assumption.
- Judge whether each scenario can meet placement conditions under an honest definition you state.

How Workflow A will challenge you

Before you submit, Workflow A will check that you answered their questions in plain language, that you did not share the raw file, that definitions and caveats are stated, and that unanswered requests are logged. You cannot submit without their online confirmation on the handoff checklist.
